DATA DASHBOARDS

Caminito de la escuela
La información representada y el contenido de los datasets es

- **Total de escuelas**
  - GUARDERÍA
  - PREESCOLAR
  - PRIMARIA

- **Escuelas más vulnerables**
  - TOP 3 POR DELEGACIÓN

- **Atropellamientos***
  - POR CUADRANTE
  - 1
  - 56
  - 4.68 AVG

- **Delegaciones**

Cities typically have far more data on early childhood development than they know, spread throughout their departments. A data dashboard can be a great starting point to promote cross-sector collaboration.

We have not yet seen any dashboard with comprehensive data on babies and toddlers, as they are usually a subsection of those focusing on the general population. Dashboards would ideally be able to overlay information about the location of young children and pregnant women on top of data about: well-being of children and caregivers; location and use of key services; location and use of public space.
